Key factors in the Eleven X Bathroom Lighted Mirror

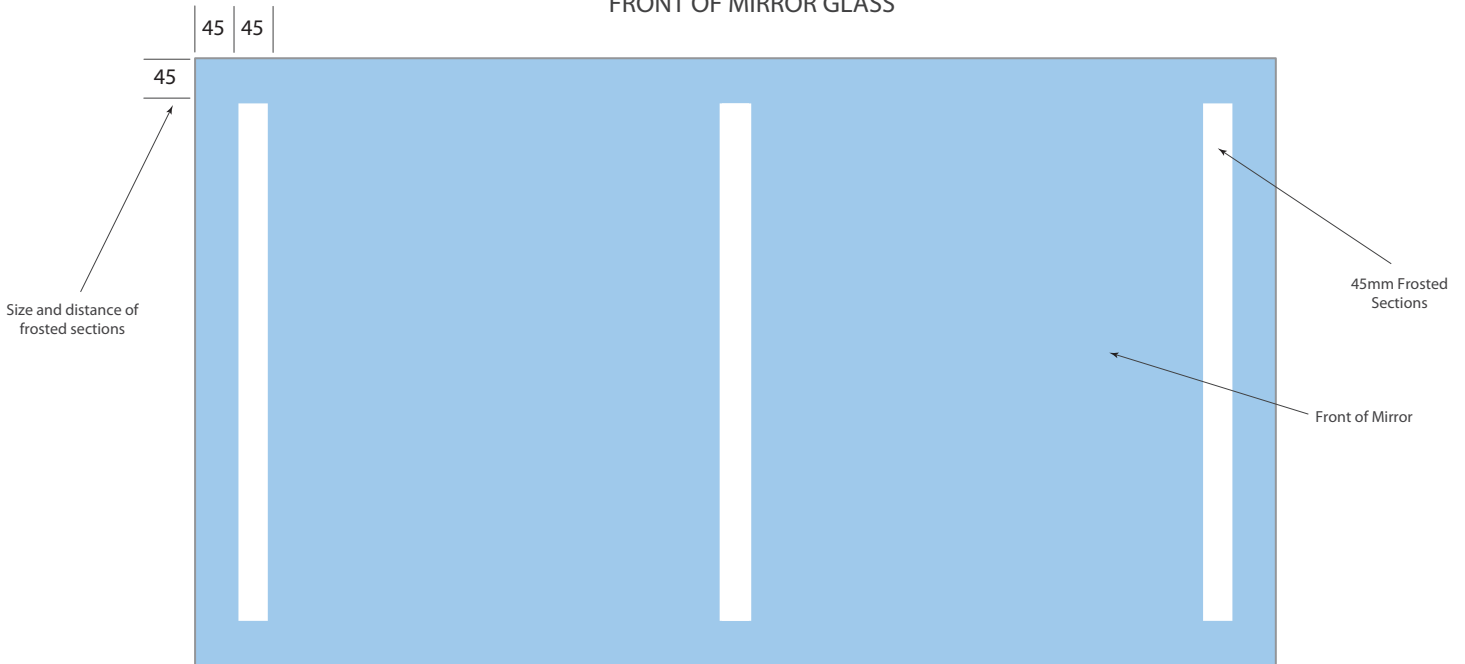

- Standard low profile of 20mm between the back of the mirror glass and the wall.
- All Aluminium Lightbox . The mirror is hung with two of our double split battens in our safe and easy, exceptionally strong, hanging system.
- The mirror is Guardian Ultra Mirror (corrosion resistant). Ultra Mirror is Guardian's most beautifully reflective and durable mirror, providing unparalleled protection against corrosion, chemicals, moisture and abrasion. They use a silvering process that replaces copper with palladium resulting in a more durable mirror. The mirror's backing has an ultraviolet coating for added durability.
- There are 3 frosted sections in the Eleven X Bathroom Lighted Mirror. Each section is lit with LED lights that border around the total length of the frosted section. Because each section is lit the same as the next, this provides an ultra bright and even light. (please see page 2 for detailed drawing of the inside of the lighted mirror, there is an arrow pointing out the 5050 LED Lights)
- Safety. The LED lights are powered by 12volt DC and IP67 rating of components ensure that the mirrors are safe from possible electric shock, especially in the potentially wet area of the bathroom. The de-mister heating pads, also 12volt, Made in the UK and are of the highest quality.
- Lighting. 12vDC 5050 LEDs that output 20 lumens per chip or 1200 lumens per metre, CRI ≥90.
Natural daylight (4500k) 14.4 w/m. (standard)
Warm white (3000k) 14.4 w/m. (optional)
RGBW (Multi-Colour LEDs with Pure White), pick any colour or white with a remote 23 w/m. (this is an Extra)
